

How long before you get intelligent wiring? Build it in.

Optimize productivity

Detailed information enables better process control, more detailed diagnostics and reduced downtime.

Optimize system availability

Avoid downtimes of systems through overload prewarnings before the trip.

Remote data access

See your process data whenever and wherever you are for remote maintenance activities.

Easy expansion

SmartWire-DT makes it easy to add expansions during operation inside or outside the control panel.

Up to 70% reduced engineering costs

Intelligent wiring minimises system complexity, significantly reducing engineering costs.

600 metres

Intelligent wiring connects decentralized cabinets and field components in wide spread systems.

Up to 30% cost reduction

Intelligent wiring can reduce the life cycle costs of your electrical installation from design to maintenance.

Industry 4.0 IoT ready

Intelligent wiring assists you to make your system ready for the Internet of Things (IoT), providing real time data for prompt decision making.

-25° up to 70° temperatures

Intelligent wiring is durable and can withstand temperatures of between -25 and 70 °C outside the cabinet.

Up to 85% reduced wiring time

Intelligent wiring simplifies the wiring process and reduces the time for testing and commissioning.

Up to 40% less cabinet space

Intelligent wiring is compact and significantly reduces necessary cabinet size.

Summary

An **intelligent wiring solution** offers significant benefits for companies looking to reduce the challenges of control wiring and enable real-time communication.

SmartWire-DT reduces the effort and expense of connecting switch cabinet components and field devices. It makes it easy to get visibility of the entire network.
